NEW PRODUCTS FOR LAW FIRMS

## Better Blocking

### New Data Protection Solution Controls, Protects Information

Enterprise data protection supplier PGP Corporation and next-generation data leakage prevention (DLP) solutions provider Fidelis Security Systems have announced a strategic technology relationship to offer a comprehensive data protection solution that combines network DLP and enterprise data encryption technologies.

Today's DLP technologies detect a broad range of sensitive information and critical intellectual property, allowing organizations to stop potential data breaches from occurring before data leave their network. Comprehensive data encryption solutions allow companies to protect information as it travels between devices within and across corporate boundaries.

However, because stopping data flow interrupts business continuity and affects business loss, an integrated solution needs to understand when sensitive information must be blocked and when it should be released – and how to protect it.

PGP Corporation and Fidelis Security Systems are providing an integrated solution that enforces encryption through configurable data security policies. The solution combines Fidelis Security's top-rated network data detection with PGP Corporation's world-renowned enterprise platform and e-mail security programs – which includes file and e-mail encryption – enabling security officers to precisely designate which content should be encrypted, blocked, or logged for review.

For more information, visit [www.pgp.com](http://www.pgp.com) or [www.fidelissecurity.com](http://www.fidelissecurity.com).

## Full Service

### Company Combines Legal Staffing Offerings with Document Review, Discovery Services

Staffing service provider Peak Organization Inc. has launched a new service, Peak Legal Solutions, to combine legal staffing with document review and discovery operations.

Peak Legal Solutions offers a comprehensive temporary, permanent, and "temp-to-perm" legal staffing service – including attorney, paralegal, litigation support, and legal support staffing. The service allows for concise communication between project managers who are running the review and project recruiters, such as attorneys, paralegals, or litigation support specialists.

Peak uses historical data from its proprietary software, Peak Review Metrics – which measures the accuracy and performance of individual reviewers and the group during the document review process – to identify reviewers who have performed well on reviews pertaining to a particular industry or practice and to place them on reviews matching that criterion.

For more information, visit [www.PeakLegalSolutions.com](http://www.PeakLegalSolutions.com).

## Right on Track

### Grouping, Search Capabilities Help Users to View, Process Electronic Information

E-discovery and electronically stored information consultant Kroll Ontrack's Ontrack Engenium Advanced Search Technology product suite now includes e-mail threading and near-duplicate identification modules.

With concept searching, topic grouping, near-duplicate identification, and e-mail threading, the system allows end users to reduce the time and cost associated with culling and searching through large volumes of potentially responsive data for investigation or litigation.

Utilizing the e-mail threading module, users can quickly view all related e-mails that have been sent and received in a conversation thread and can easily identify the e-mail chain's starting and ending point.

For more information or to schedule an online demonstration, visit [www.ontrackengenium.com](http://www.ontrackengenium.com).

## All Access

Web-based Management and Billing Product Offers Remote Connections, Enhanced Search Capabilities

Legal productivity solution provider  
Rocket Matter has

continued to fine-tune its signature Rocket Matter product – which addresses legal practice management and time and billing needs – by adding searchable custom fields. The additional tagging capability allows Rocket Matter users to create custom keywords and tag matters, documents, and contacts to organize and locate information quickly.

Rocket Matter also now features a statute of limitations report so firms can quickly assess statute of limitations deadlines and view the firm's billable activity by user.

Because Rocket Matter is a browser-based Software-as-a-Service (SaaS) product that can be accessed from remote locations using an Internet connection, firms also can utilize Rocket Matter to minimize risk that could result from natural disasters such as hurricanes, floods, fires, tornadoes, and earthquakes.

Any computing platform with a modern browser – including Macs, PCs, Linux or mobile devices such as the Apple iPhone – can use Rocket Matter. To ensure information is stored safely, Rocket Matter servers are located in highly secure data centers and are continually backed up in multiple geographic locations.

For more information, visit [www.rocketmatter.com](http://www.rocketmatter.com).

## Communicate at Less Cost

MyFax Spotlights Potential Savings for Medium to Large Corporations

A new white paper from Internet fax service MyFax highlights the cost reductions that a hosted fax solution offers medium to large companies.

The report, *Migrating from Fax Servers to the Cloud*, discusses the options available to organizations that have decided to re-examine their fax systems and provides a framework for migration from a fax server to an Internet fax solution such as MyFax, which allows users to send and receive faxes via e-mail.

## THE TECH 10

- 1 Document Technologies Inc.-owned **LitWorks**, which develops and shares best practices in the litigation support industry, has added custom Web-based team training for both large and small litigation support departments to its existing course catalog. [www.DTIGlobal.com](http://www.DTIGlobal.com)
- 2 Legal technology creator **Workshare** has released two new legal document management guides by collaboration expert Mike Osterman: *A Guide to Managing Documents in Today's Law Firms* and *A Guide to Document Comparison and Security for Corporate Legal*. Both resources review the key challenges that legal professionals encounter when exchanging documents and managing document review cycles. [www.workshare.com](http://www.workshare.com)
- 3 **Legal Files Software Inc.** recently released a new version of its browser-based case and matter management software, the Legal Files Web 6 series, which includes enhancements to the program's document management, calendar, reporting, and e-billing features. [www.legalfiles.com](http://www.legalfiles.com)
- 4 **Navigant Consulting Inc.** recently launched its advanced e-discovery portal, which is built upon Microsoft Office SharePoint Server 2007. [www.navigantconsulting.com](http://www.navigantconsulting.com)
- 5 **Esquire Innovations Inc.** – which provides Microsoft Office integration software for legal and document-intensive firms – recently released new versions of iCreate, its document production and formatting software, and iRedline, a document comparison and revision collaboration tool for Microsoft Word documents. [www.esqinc.com](http://www.esqinc.com)
- 6 Hosted collaboration source provider **PBworks** (formerly known as PBwiki) has launched PBworks Project Edition, which combines hosted collaboration and project management to allow professional service firms to collaborate with clients, share plans, and gather feedback. [www.pbworks.com](http://www.pbworks.com)
- 7 The new Green PC service from **Comodo** allows users to optimize obscure PC settings to reduce their computers' electricity consumption. After initiating a free trial of Comodo's LivePCSupport – a service providing PC users with constant remote-access technical help – users simply have to log on to chat and tell the Comodo expert that they would like their computers optimized as Green PCs. [www.comodo.com](http://www.comodo.com)
- 8 The Aspire 3935 notebook computer from **Acer** was named a gold-level award winner at the Computex Taipei Design & Innovation Awards 2009, which is organized by the industrial design institution International Forum Design. [www.acer.com](http://www.acer.com)
- 9 **Sony** has updated its line of digital voice recorders with six models that offer new designs and key features for users who want a single recording device for voice, music, and portable file storage. [www.sony.com](http://www.sony.com)
- 10 Hosted legal service provider **doeLegal** has incorporated alternative fee arrangements (AFAs) into its doeBilling electronic billing solution. [www.doelegal.com](http://www.doelegal.com)

## Not One Size Fits All

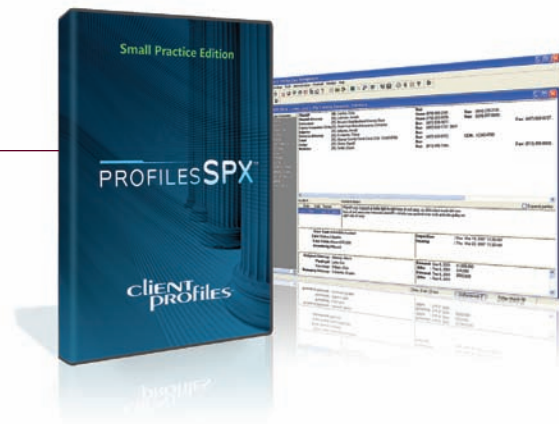

New Practice Management Software Is Customized for Use by Small Firms

Case and financial management applications creator Client Profiles recently released ProfilesSPX, practice management software that has been customized for small law practices.

With ProfilesSPX, small firms can deploy the same powerful features – including docketing, calendaring task management services, e-mail and messaging management, and contact management – found in more expensive systems used by larger firms, and all at a lower cost. The first three user licenses are included in the SPX base price, so small firms don't have to pay for their first sets of users. The system allows for up to 10 users and is easily expanded.

Available as either a full practice management suite or as individual front- and back-office bundles, additional modules – such as enhanced scanning and imaging, full text search indexing, and Microsoft Exchange/Outlook integration installation – are also available with the software.

For more information, visit [www.ProfilesSPX.com](http://www.ProfilesSPX.com).

## Multitasking Management

IKON Offering Emphasizes Flexibility in Document Workflow, Litigation Support

Document management systems and services provider IKON Office Solutions Inc. recently launched IKON Litovation Solutions, a portfolio of services designed to provide highly flexible litigation support and document supervision solutions. IKON Litovation Solutions provides flexible offerings to assist in every phase of the legal discovery lifecycle.

In addition to IKON's managed services offering – which includes onsite staffing, copier/printer fleet management, and copy and mail room services – and IKON's offsite document processing centers, the IKON Litovation Solutions portfolio includes a forensic data harvesting process that provides an efficient way for law firms and corporations to remotely collect data and electronic data discovery services. The portfolio also offers document imaging services, provided through a network of litigation technology and processing centers, onsite imaging, document coding, and indexing services; and more.

Where Litigation Meets Innovation

## Paperless Process

Nuance Communications Solution Offers Easy PDF Creation, Collaborative Elements

DSpeech and imaging solutions provider Nuance Communications Inc. recently introduced Nuance PDF Converter Professional 6, the newest release of its flagship desktop PDF solution.

The new version includes features that let users create, edit, convert, and share PDFs and is a potential substitute for Adobe Acrobat software that is roughly one-third the cost, according to Nuance. (The company offers an interactive savings calculator — [www.betterpdf.com/calc/corp/](http://www.betterpdf.com/calc/corp/) — to allow companies to estimate their overall savings.)

The PDF converter also includes several features that bridge the gap between paper and digital document workflows – saving office workers significant time and expense and accelerating green office initiatives.

The product allows for paperless collaboration, embedding file types and folders – including PDF and Microsoft Office documents, and even images and videos – into a single PDF file with simple click-and-drag steps.

PDF Converter Professional 6 also allows users to scan paper documents directly to PDF, which saves time by eliminating the need to scan and then convert the resulting image.

For additional information, visit [www.nuance.com/pdf](http://www.nuance.com/pdf).

## Scanning Ingenuity

### Device Allows Users to Digitize Wider Variety of Documents

Scanner manufacturer BÖWE BELL + HOWELL recently released Ngenuity, a production scanner that helps users to digitize a wide range of documents – ranging from plastic cards to stuffed envelopes – quickly and easily. Ngenuity scans documents at up to 150 pages per minute (ppm) at 200 DPI in color, bitonal, and grayscale. The scanner's rotary paper path allows users to scan documents such as invoices, forms, and contracts.

For more information, visit [www.bbhscanners.com](http://www.bbhscanners.com).

## Tech Transfer

### eMag Solutions Eases Challenges of Exporting Data Globally

Corporations and law firms who work in countries with privacy laws that limit how

data are exported have an option to make the process easier: eMag Solutions, LLC.

Enterprise content management and electronic discovery solutions provider eMag offers international onsite collection capabilities and can process large amounts of data without that information ever leaving a client's facility.

In the past year, eMag has performed data collection and processing in 19 countries. It has completed projects – ranging from duplication of simple backup media to restoration of legacy tapes where the original infrastructure was no longer in place – in nine European countries, 22 U.S. states and Asia.

eMag has performed many onsite processing services, including forensic collection, tape cataloging, e-mail extraction, date and keyword filtering, de-duplication, near duplicate identification, creating TIFF images and load file creation.

For more information, visit [www.emagsolutions.com](http://www.emagsolutions.com).

## On the Move

### New Data Transport Service Facilitates Fast Mapping, Transferral of Information

Electronic discovery provider Orange Legal Technologies has released the OneO Data Transport Service, a targeted data

transfer solution that allows users to quickly map and transfer data between different electronic discovery applications and services.

The OneO Data Transport Service provides complete mapping of electronically stored information formats to include text, sound, still and moving images, Web archives, and generically accepted wrappers and encodings. The new service also handles foreign languages – including double-byte character languages such as Chinese, Japanese and Korean.

In addition, the OneO Data Transport Service can be utilized to consolidate previously generated paper, TIFF and PDF documents into a single searchable repository for use in future e-discovery matters.

For more information, visit [www.orangelt.com](http://www.orangelt.com).

## Joint Opportunity

### New Needles Version Includes Juris Interface

The recently released update of Needles Case Management Software, Version 4.8, includes a bi-directional interface with Juris billing software that allows the two programs to easily exchange information.

The Needles/Juris interface gives users a variety of new options. Users now can create a new client and matter in Juris when a new case is created in Needles and send cases that are open in Needles to Juris. Any changes made to client name, address, phone or fax number information in Needles will also automatically update the information in Juris, and vice versa. In addition to the new Juris interface, Needles Version 4.8 also offers an improved status screen that allows clients to take better advantage of eCaseStatus, a password-protected application that allows law firm clients and referring attorneys to access case status information online.

For more information, visit [www.needles.com](http://www.needles.com).
